

CT – ACUTE MEDICAL + SURGICAL INTERPRETATION

The perfect introduction to computed tomography in the acute clinical setting.

COURSE OVERVIEW

Designed in an interactive learning format, the course covers acquisition, normal variations, patterns of disease and pitfalls in CT imaging of the head, chest, abdomen, pelvis, cervical and thoracolumbar spine. Each module is composed of a lecture followed by an interactive session where participants review CT cases alone or in pairs to reinforce fundamental learning objectives.

Our goal is to provide practitioners with the knowledge and confidence to interpret CT findings in commonly encountered acute clinical settings.

The course includes 4.25 hours of online pre-course work and a post-course test on completion.

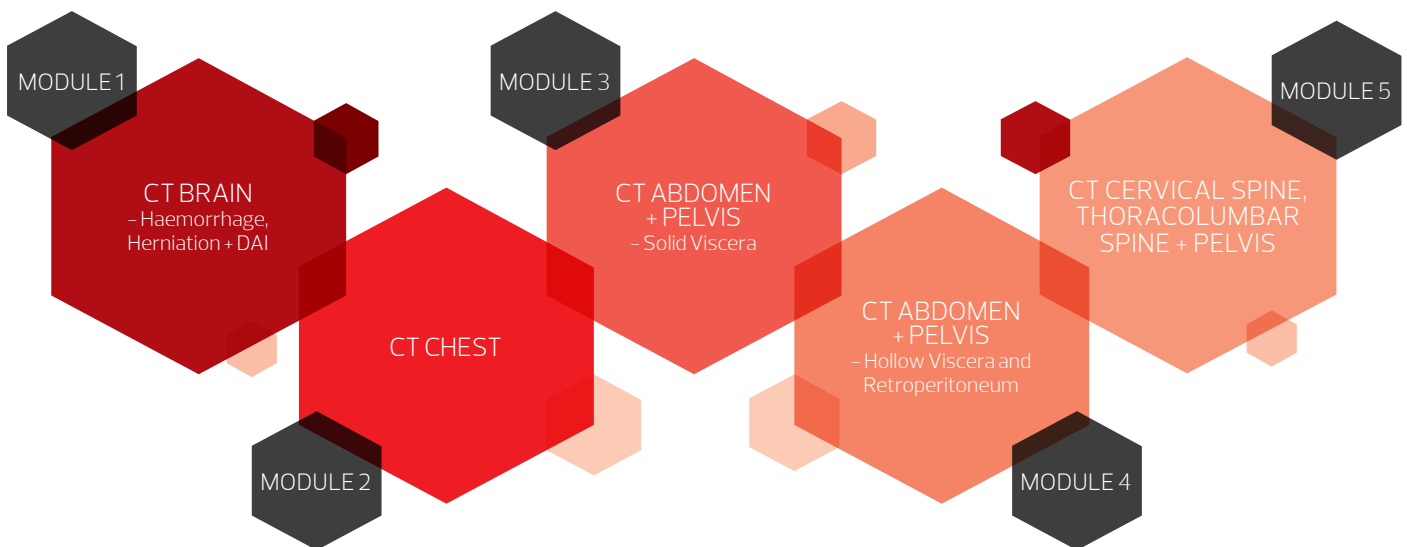

COURSE DATES 2019
